

# PYTHON MACHINE LEARNING PRO-TIPS

**Adam Geitgey**

Second Edition

# Python Machine Learning Pro Tips

Second Edition

Adam Geitgey

Second Edition, Version 2.0.0

# Contents

<b>1 Why Use Python for Machine Learning?</b>	<b>6</b>
<b>2 Choosing Between Python 2 and Python 3</b>	<b>9</b>
<b>3 NumPy and Vectorization</b>	<b>11</b>
Memory Efficiency . . . . .	11
Automatic Vectorization and Processor Efficiency . . . . .	13
Matrix Operations with NumPy . . . . .	16
<b>4 Pandas</b>	<b>17</b>
<b>5 Scraping Web Data with Pandas</b>	<b>23</b>
<b>6 Plotting data with Matplotlib</b>	<b>28</b>
<b>7 Speeding Up Data Processing with Parallelism</b>	<b>33</b>
The Normal Approach . . . . .	34
Parallelizing Code with Process Pools . . . . .	36
When to Use Process Pools . . . . .	40
Bypassing the Global Interpreter Lock . . . . .	41
<b>8 Working with Files Using Pathlib</b>	<b>42</b>
The Wrong Solution: Building File Paths by Hand . . . . .	43

## *Contents*

The Old Solution: Python’s os.path Module . . . . .	44
The Better Solution: Python 3’s Pathlib . . . . .	45
<b>9 Images and Exif Orientation</b>	<b>48</b>
How Digital Cameras Auto-Rotate Images . . . . .	48
Why Does This Break so Many Python Computer Vision Applications? . . . . .	51
Fixing the Problem . . . . .	54
<b>10 Reduce Bugs with Static Type Checking</b>	<b>56</b>
Preventing Bugs with Type Annotations . . . . .	57
How to Declare Types . . . . .	59
Declaring Complex Types . . . . .	61
Running a Type Checker . . . . .	63
When to Use Type Declarations . . . . .	64
